

# Naco is cool

## Naco Sunscreens

Recently completed is a business park project in Brighton which involved the supply and fix of Naco sunscreens finished in polyester powder coat. The sunscreens were produced from Naco 200 and 400 ellipsoid blade profiles, the 200 being used on the shorter horizontal projecting screens while the 400 profile was used for the longer spans running horizontally in

front of the window system. Both blade profiles were fitted to contractor installed steel tubular framework.

shading for the students within a modern school complex.

Ellipsoid sections from our 200, 300 and 400 profiles were recently supplied and fitted by Naco installers for a school project in Leeds. The contract provided both horizontal and vertical screen solutions, offering effective

## Naco Natural Air Ventilators

One of the UK's leading test houses for window and curtain walling structures has recently conducted air and water tests in accordance with BS 6375-1:2004 for a Naco Natural Air Ventilator unit. The NAV unit comprised a 1 m<sup>2</sup> test sample incorporating a standard 50 series external metal louvre and an internal thermal break damper from our Weatherbeta 32 range. This NAV unit remained watertight at 900 Pa and also achieved air leakage of less than 5 m<sup>3</sup>/hr/m at 300 Pa.

The Naco NAV system is currently being used in a number of projects in both commercial and public buildings to meet the need for controlled day ventilation and night time cooling. NAV dampers can be fitted with a number of actuators to suit the operation requirements and are normally linked into the BMS which activates the damper as required. The external metal louvre can be from our standard louvre range or from our high performance range.
